

TEKT INDUSTRIES - POSITION DESCRIPTION

Graduate Software Engineer

App & Cloud Development | Full-time | Melbourne - Hybrid

About the role

Start your career building the software side of connected products -- companion apps, cloud services and device tooling -- with a structured graduate program, a mentor in each codebase, and hardware you can hold.

Responsibilities

- Build features across companion apps (React Native / Flutter) and cloud backends (TypeScript, serverless) under mentor review.
- Write device-facing services: telemetry ingestion, OTA delivery, provisioning APIs.
- Contribute test coverage, CI checks and documentation as first-class work.
- Rotate through app, cloud and DevOps squads across your first year.
- Demo your work at sprint reviews -- to the team and, when ready, to clients.

What we look for

- A completed (or final-semester) degree in software engineering, computer science or similar.
- Evidence you build things beyond coursework -- repos, hackathons, side projects.
- Grounding in JavaScript/TypeScript or a typed backend language; git fluency.
- Curiosity about hardware -- you want your code to touch the physical world.
- Clear written communication and an appetite for code review.

How to apply

Apply through the careers page on www.tektindustries.com with your CV attached, or email careers@tektindustries.com quoting the role title. Include links to repositories or projects you are proud of.
